

Windows OS/Standalone Updating CARS

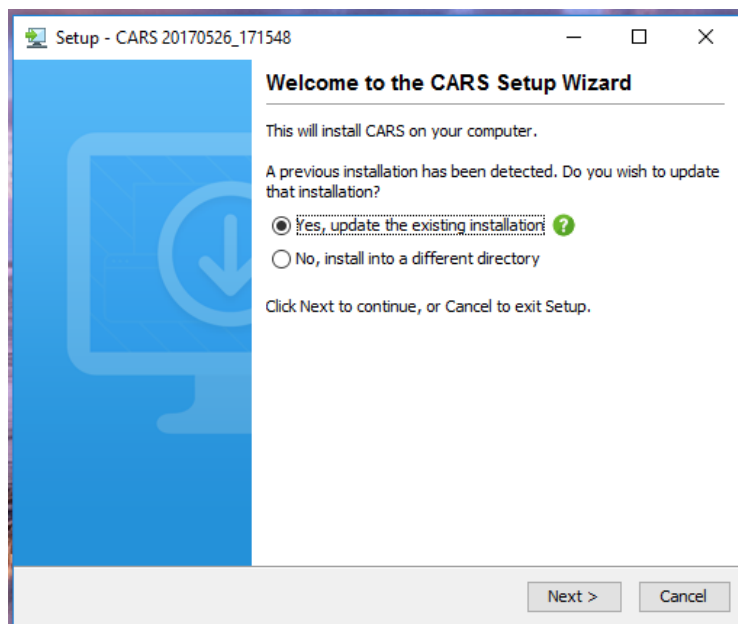

Quick Guide
1/31/2018

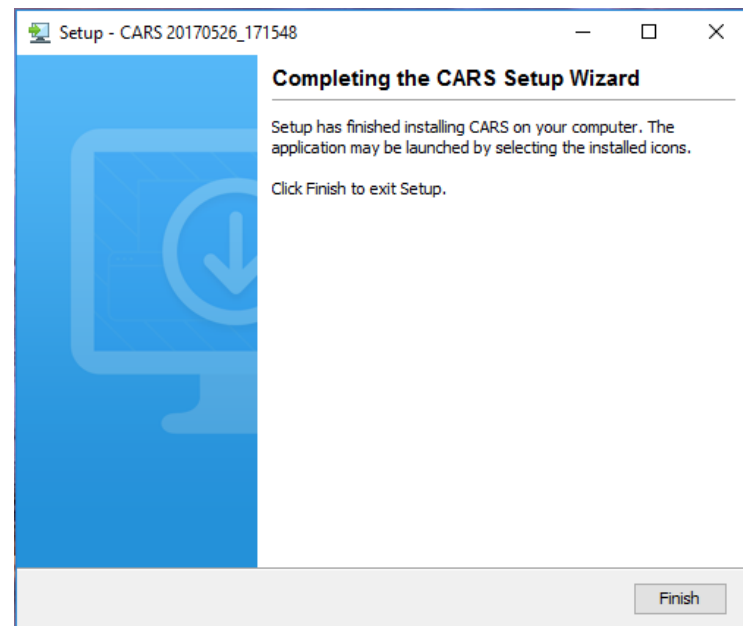

This Quick Guide will walk you through the **first** of **two** steps that you will need to take to update CARS.

Updating CARS:

1. The CARS team will send registered users an email notification each time a new CARS software update is available.
2. To access the new software update, go to the "[Download CARS](#)" page of the CARS website.
3. Click on the file designated for a Windows system (.exe), and download. Open the CARS installer by clicking on the installer icon.
4. Select the default option "Yes, update the existing installation", and click "Next". Data from your previous CARS sessions will be automatically **backed-up**.

5. When the setup has finished, click "finish".

6. After completing the installation, go into your start menu or directory, find the CARS application, and select it to begin.
7. Repeat these steps on every computer running CARS.
8. When you have completed these steps, continue to the Quick Guide for "**Restoring your Data**" to restore your **backed-up** data.
